## Changes

The following changes were made from our proposal to our prototype:

- We decided to change the backgrounds from solid colour to images related to our game, since it creates more of a Game feel.
- -The navbar layout changed from being "Platforms" to a regular navigation bar.
- We changed our approach from mobile first to desktop, since our users will be playing the game from a desktop.

## General Notes

There is a bug with our functionality

### **To enable mouse wheel horizontal scroll:**

- Line 20 of CSS needs to be enabled (position: fixed)
- Remove the attributes from the body tag in index.html

### **To enable NAV links and animation scroll:**

- Line 20 of CSS needs to be disabled (remove it)

### **If you end up seeing a blue screen with navbar:**

- Scroll up to reach the top
- Note: This only happens if you switch between functionality
